

Activity 15

1. A wall shows a shadow of 32 m in the floor; same time that vertical rod of 1.2 m shows a shadow of 97 cm. Calculate the height of the wall.

2. An observer, whose eye height is 1.67 m, observes, erect, the highest part of a vertical object in a mirror. Calculate its height, knowing that the mirror is located 10 m from the base of the building and 3 m from the observer.

3. Find the values of DE and BC, if $AC=14$, $DC=3$, $EC=2$ and $AB=12$.

To write Strictly Mandatory each of the points in your notebook.
